

SoundTube FP 6030

The SoundTube FP 6030 is a 30" clear plastic dome solution for focusing sound in small areas. It can be used in conjunction with a video monitor, while playing a presentation. For tradeshows, the added motion sensor allows audio to automatically start/stop as a person walks under it. For the best experience, the SoundTube should be hung no more than two feet above the listener.

Included in the LMG SoundTube kit is a small amplifier and if needed, a suspension hook for a client provided structure.
