

# K2 SPEAKERS

Any on-site deployment can be easily and quickly achieved thanks to an extremely fast and captive rigging system. Interelement angles can be set with laser like accuracy up to a generous 10 degrees, allowing the optimization of the vertical coverage with SPL smoothly spread across the audience. The K2 also features the PANFLEX technology, a unique solution for adjusting the horizontal coverage pattern to any audience or room geometry. Four different settings are possible: two symmetric and two asymmetric.

## FEATURES | SPECIFICATIONS | BENEFITS

- K2, full-range element, with adjustable horizontal directivity, operating from 35 Hz to 20 kHz
- LA4X/LA8 amplified controllers or LA-RAK, touring rack fitted with three LA8
- K1-SB, low-frequency element, reinforcing LF contour down to 30 Hz or LF throw down to 35 Hz
- SB28, low-frequency element, extending the operating bandwidth down to 25 Hz
